

The Smart & Resilient Schools Program is hosting a series of highly interactive and participatory workshops.

Help your school and community chart a path to clean air, clean energy and engaged citizens.

- // Did you know that energy is typically the second biggest expense for schools after labor?
- // Did you know that your local school district might be spending millions of dollars per year on energy, even if you have solar?
- // Are you interested in learning how you can save money, clean up air quality & re-invest into community practices, curriculum & instruction that is interdisciplinary and rooted in real-world context?

Let's talk about changing our energy future.

Join us for highly interactive and participatory workshops.

// Discover what drives energy use through exploration & discovery;

// Understand the relationship between cost, ease, sustainability & other factors when making choices that impact energy;

// Test & explore various solutions in the real world and learn about their potential impact.

WHEN

We partner with communities to offer 2-8 hour in person & virtual workshops. We explore building decarbonization & energy flexibility.

WHO

Students, parents, community members, school administrator, educators, maintenance & custodial staff, IT and networking professionals, fleet/motorpool managers, building automation & controls providers, HVAC contractors, energy managers.

WHERE

All meetings will be hosted by our community partners & typically include a virtual option. The workshops use interactive games, tools, presentations, and engaging real-world data for a dynamic & interactive experience.

Let's talk about changing our energy future.
